

VIRTUAL REALITY

Various options and scenarios can be created on a simulator motion platform. Depending on the theme the motion platform can hold a defined number of seats. The system is supported with state-of-the-art synchronized Audio-Visual & Lighting equipment with curated, customized Audio-Visual Content from 3- 7 minutes as required.

Typical Specifications: 4 Module Seats Motion Platform, Projectors 10K Lumens, Synchronous Servers, DMX Light Controls, Lights, Audio Equipment, Media Creation, 4k Stereo, 4k Mono, SFX Integration & Programming.

In depth briefing regarding the scope of work is discussed with client and the hardware, software, content & fabrication team to ensure all details are met to achieve the first and second cut of the vision of the visual representation. Finally, designs are submitted by the fabrications team to take final approval from the client.
